# hyaluronic acid

## WHAT IT IS

Humectant

## ALSO KNOWN AS

none

## USAGE

Hyaluronic acid is a hydrophilic (water-loving) compound that has the ability to draw moisture right out of the air and hold up to 1,000 times its weight in water in the skin. It is naturally present in all our connective tissues and skin, but because our body's production of this slows as we age, this ingredient is widely used in skin care products designed to battle dryness and improve skin texture and elasticity. Hyaluronic acid is also used as a natural alternative to synthetic fillers injections.
